ZERO $\neq$ `CERTIFIED_BY_RULE`   finite coefficient ZERO $\neq$ remainder proof

Each cell names a claimed move τ and a certificate class c. The two axes are independent.

τ: algebra c: engine ZERO result: EXACT_ZERO	τ: substitution c: ZERO after $\varepsilon_{21} = -\varepsilon_{12}$ result: ZERO_UNDER_SUBSTITUTION
τ: BZ integration by parts c: local Leibniz ZERO + torus rule result: CERTIFIED_BY_RULE	τ: asymptotic $O(\Gamma)$ claim c: no remainder certificate result: UNKNOWN_REMAINDER

Certificate class is provenance, not a ranking of mathematical truth.
